WHAT IS ENDO CRINO LOGY?

ENDOCRINOLOGY IS THE FIELD OF MEDICINE INVOLVING THE DIAGNOSIS AND TREATMENT OF DISORDERS OF THE ENDOCRINE SYSTEM.

These disorders include diabetes, thyroid disease, hormone imbalances, metabolism disorders, hypertension, cholesterol issues and endocrine cancer.

Watson Clinic's expert Endocrinology team – consisting of board-certified physicians **Vindya Boelke, MD** and **Khanh T. Pham, MD**, provide comprehensive treatments for these and other related disorders. One of their principal areas of expertise lies in the management of diabetes, a disease which is thought to afflict over 30 million people in the U.S. alone.

Diabetes is caused by a shortage or resistance to insulin, a hormone that is produced by the pancreas to control blood sugar levels. Without proper diagnosis and treatment, diabetes can lead to fatigue, vision loss, peripheral vascular disease, hypertension, stroke and more.

From the prescription medications to guidance on matters of diet and exercise, Watson Clinic's Endocrinology team works closely with each patient to help them properly manage their disease. Their efforts are further supported by Watson Clinic's Certified Diabetes Educators who offer self-management classes and individual training sessions with a physician referral.
